

# Scoring

## SUS scoring (standard):

- For items **1,3,5,7,9**: score = (response – 1).
- For items **2,4,6,8,10**: score = (5 – response).
- Sum the 10 scores and multiply by **2.5** → **SUS score (0–100)**.

## Interpretation (rules of thumb):

- ~68 = average; **>80 ≈ excellent**; **<68** suggests usability issues. Report **median [IQR]** and/or **mean ± SD**, plus % of scores **>68**.
